

Muhd Harris

Network & Security Engineer

Kuala Lumpur, Malaysia · muhdharris40@gmail.com · github.com/muhdharris · linkedin.com/in/muhdharris

PROFILE

Network and security engineer with a year of professional experience at InnoSphere Technologies Sdn. Bhd., and a self-hosted Proxmox homelab maintained end to end. Cisco Networking Academy coursework across networking and security operations. I work where infrastructure meets security: configuration, diagnosis, and the troubleshooting that keeps systems up when they fail in ways nobody expected.

EXPERIENCE

Network & Security Engineer — InnoSphere Technologies Sdn. Bhd.

Jan 2026 – p

- Network design and maintenance — IP addressing, VLAN segmentation, routing and switching, DNS and DHCP.
- Firewall policy — rulesets, NAT, port forwarding, and reviewing what is reachable from outside.
- Access layer — managed switches and wireless APs covering staff and guest wireless.
- Ad-serving infrastructure deployment and upkeep.
- Peplink routers and edge devices — configuration, firmware, and failover across sites.
- EDR tooling — alert response and keeping endpoint coverage current.
- Incident response — isolating faults, restoring service, and documenting the changes.

Intern — Wevo System Sdn. Bhd.

Mar 2025 – A

- Server deployment — set up and configured physical and cloud servers: installation, domain setup, network configuration, testing and validation.
- Telephony — installed and configured IP phones: hardware installation, and basic user training.
- Onsite support — diagnosed hardware faults, reconfigured systems, and validated the fix.

EDUCATION

BSc Computer Systems and Networks

2020 – 2025

University Malaya (following a foundation year)

PROJECTS

Supply chain tracking on Ethereum

Solidity · Dart/Flutter · Hardhat · Testing · github.com/muhdharris/truechain

- Final-year project, audited and rebuilt after finding the contract could not support what the app claimed.
- Rebuilt so the contract is the only source of truth: every read is a chain call, every write returns a real hash.
- Committed the generated ABI instead of inlining it in Dart — the original drift was invisible until reads failed.
- Role-gated transitions, on-chain stock checks, bounded pagination; 64 assertions cover the flows, including the ones that must revert.

Home infrastructure and fault diagnosis

Proxmox VE · Linux · Docker · NFS/SMB · Write-ups · github.com/muhdharris/homelab

- Two-node Proxmox cluster, Docker host running 16 containers, NAS over NFS and SMB.
- Diagnosed two hardware faults that each took the cluster offline, and published the full write-ups.
- The first fix came from a forum post, held four days, and was still wrong — a second layer was causing the hang.

Network scanner

Python · Flask · Nmap · github.com/muhdharris/networkscanner

- Scheduled host scanning service: single scheduler thread, interruptible scan loop, stop endpoint.
- Scan failures are caught and logged instead of silently killing the scheduler.

CISCO NETWORKING ACADEMY COURSEWORK

Introduction to Networks

Jun 2022

Cisco Networking Academy — Protocols, subnetting, traffic behaviour.

Switching, Routing & Wireless Essentials

Jul 2023

Cisco Networking Academy — OSPF, VLANs, NAT, wireless configuration.

Enterprise Networking, Security & Automation

Jul 2023

Cisco Networking Academy — Security controls and automation at enterprise scale.

Introduction to Cybersecurity

Jun 2024

Cisco Networking Academy — Detection, investigation, incident response.

TECHNICAL SKILLS

Networking — TCP/IP, DNS, DHCP, SNMP, ICMP · OSPF, EIGRP, static routing, VLANs · subnetting, IP addressing, NAT · LAN/WAN design, redundancy

Security — firewall configuration, ACLs, network access control, VPN · endpoint detection and response, incident response

Troubleshooting — Wireshark, ping, traceroute, Nmap — packet-level diagnosis

Infrastructure — Proxmox VE, KVM, LXC · Linux server administration · NFS, SMB, DNS (Pi-hole) · Docker, Compose · hardware diagnostics

Cloud — AWS — foundations level coursework; VPC design and security groups studied, not yet production work

Simulation — Cisco Packet Tracer, GNS3, VMware

Development — Solidity, Dart/Flutter, Java, Python, JavaScript · MySQL · Git, GitHub Actions
