Muhd Harris

Network & Security Engineer

Kuala Lumpur, Malaysia · muhdharris40@gmail.com · github.com/muhdharris · linkedin.com/in/muhdharris

PROFILE

Network and security engineer in company infrastructure since Jan 2026, running a self-hosted Proxmox homelab on the side. Cisco Networking Academy coursework. Configuration, diagnosis, and the troubleshooting that keeps systems up when they fail in ways nobody expected.

EXPERIENCE

Network & Security Engineer — InnoSphere Technologies Sdn. Bhd.

Jan 2026 – p

- Network design and maintenance — IP addressing, VLAN segmentation, routing and switching, DNS and DHCP.
- Firewall policy — rulesets, NAT, port forwarding, and reviewing what is reachable from outside.
- Access layer — managed switches and wireless APs covering staff and guest wireless.
- Ad-serving infrastructure deployment and upkeep.
- Peplink routers and edge devices — configuration, firmware, and failover across sites.
- EDR tooling — alert response and keeping endpoint coverage current.
- Incident: during a Huawei switch refresh, a Layer 2 loop formed with STP already running and took the firewall, and so the whole network, down. Found the cause by disconnecting switches one at a time, which stopped it within hours; then added BPDU filtering, edge ports, DHCP snooping and link-flap auto-recovery. Root cause not established — no baseline config.

Intern — Wevo System Sdn. Bhd.

Mar 2025 – A

- Server deployment — set up and configured physical and cloud servers: installation, domain setup, network configuration, testing and validation.
- Onsite support — diagnosed hardware faults, reconfigured systems, validated the fix; installed and configured IP phones.

PROJECTS

Supply chain tracking on Ethereum

Solidity · Dart/Flutter · Hardhat · Testing · github.com/muhdharris/truechain

- Final-year project, audited and rebuilt after finding the contract could not support what the app claimed.
- Rebuilt so the contract is the only source of truth: every read is a chain call, every write returns a real hash.
- Role-gated transitions, on-chain stock checks, bounded pagination; 64 assertions.

Home infrastructure and fault diagnosis

Proxmox VE · Linux · Docker · NFS/SMB · Write-ups · github.com/muhdharris/homelab

- Two-node Proxmox cluster, Docker host with 16 containers, NAS over NFS and SMB.
- Diagnosed two hardware faults that each took the cluster offline; the first fix held four days and was still wrong. Write-ups published.

Network scanner

Python · Flask · Nmap · github.com/muhdharris/networkscanner

- Scheduled host scanning service: single scheduler thread, interruptible loop, stop endpoint.

EDUCATION

Bachelor of Computer Systems and Networks — Universiti Malaya (CGPA 3.32)

2021 – 2025

Foundation in Physical Sciences — Universiti Malaya

2020 – 2021

SPM — Sekolah Menengah Sains Tengku Muhammad Faris Petra

2015 – 2019

CISCO NETWORKING ACADEMY COURSEWORK

Introduction to Networks — protocols, subnetting, traffic behaviour

Jun 2022

Switching, Routing & Wireless Essentials — OSPF, VLANs, NAT, wireless config

Jul 2023

Enterprise Networking, Security & Automation — security controls, automation at scale

Jul 2023

Introduction to Cybersecurity — threat types, vulnerabilities, security controls

Jun 2024

TECHNICAL SKILLS

Networking — TCP/IP, DNS, DHCP, SNMP · OSPF, EIGRP, static routing, VLANs · subnetting, addressing, NAT · LAN/WAN design
Security — firewall configuration, ACLs, network access control, VPN · EDR, incident response
Troubleshooting — Wireshark, traceroute, Nmap — packet-level diagnosis
Infrastructure — Proxmox VE, KVM, LXC · Linux administration · NFS, SMB, DNS (Pi-hole) · Docker, Compose · hardware diagnostics
Cloud & Development — AWS foundations coursework · Solidity, Dart/Flutter, Java, Python, JavaScript, MySQL · Git, GitHub Actions · Packet Tracer, GNS3, VMware
